SUMMARY

I am a Full Stack Developer with extensive expertise in JavaScript, TypeScript, Node.js, and React.js. I specialize in designing robust backend systems and microservices architectures using Docker and AWS. My experience spans building high-performance APIs with FastAPI, implementing real-time communication via Socket.IO, and developing cross-platform mobile applications. I have a proven track record in backend game development and creating scalable solutions for complex logistics and mobility platforms.

TECHNICAL SKILLS

- **Languages** : TypeScript, JavaScript, Python, Java, C++
- **Backend** : Node.js, Express.js, FastAPI, Socket.IO, REST APIs, GraphQL, gRPC (basic), Microservices
- **Frontend**: React.js, Next.js, HTML, CSS, Tailwind CSS, React Native (Android/iOS)
- **Database** : MongoDB, Redis, MySQL, PostgreSQL
- **Cloud & DevOps** : AWS (EC2, S3, SNS, SES), Docker, Kubernetes, CI/CD automation, BullMQ

EXPERIENCE

Full Stack Developer | *Logistic Infotech Pvt Ltd, Rajkot* – April 2025 - December 2025

- Built WAL, a freight-operations platform, end to end — Quotes, Orders, Carriers and Customer Management as connected modules, React.js front end on a Sails.js / MySQL backend.
- Architected a carrier-selection flow that ranks carriers based on rate and availability, successfully reducing quote turnaround time by 40%.
- Engineered live shipment tracking using Socket.IO to provide real-time state synchronization for operations staff and customers.

MEAN Stack Developer | *Elluminati Inc, Rajkot* – April 2024 - February 2025

- Built the backend for an Uber-style on-demand mobility product: trip lifecycle, live driver location tracking, in-app rider-driver chat and a multi-channel notification system.
- Optimized driver geo-state modeling in Redis to ensure low-latency nearest-driver lookups and scaled Socket.IO rooms to support 10,000+ concurrent trips at peak.
- Designed and documented the REST API consumed by three clients — rider app, driver app and admin panel.

Node.js Developer | *Artoon Solutions, Surat* – March 2021 - March 2024

- Built real-time multiplayer game backends — point / pool / deal rummy, Teen Patti, CallBreak and Roulette — covering table lifecycle, turn timers, bet settlement and mid-hand reconnection over Socket.IO.
- Kept live game state in Redis and match history in MongoDB so a dropped player could rejoin the same hand instead of forfeiting; shipped MultiTable Rummy for concurrent seats across tables.
- Deployed a standardized core engine across 12 white-label platforms, reducing new-platform launch time from weeks to days.

PROJECTS

Multiplayer Rummy Platforms : TypeScript, MongoDB, Redis, Socket.IO

- Point, pool and deal rummy shipped live across four white-label platforms — 3+ Rummy, Artoon MGP, Team-18 MGP, Skillwinz — plus Rummy Challenge. One shared engine, four production skins.
- **Stack**: Node.js, Express, TypeScript, MongoDB, Redis, Socket.IO

Slot Booking Platform — Expo React Native, Next.js, Express / TypeScript, PostgreSQL, MongoDB, AWS

- Cross-platform booking product in active development: React Native mobile app, Next.js web front end and a Node backend with AWS SNS / SES notifications and GPS-based location resolution.

Hyze — [Playstore Link](#)

- On-demand mobility app on the Play Store with real-time chat, live driver tracking and a notification pipeline spanning push, SMS and email.
- **Stack:** Node.js, Express, Socket.IO, MongoDB, Redis, TypeScript

WAL — [Link Link](#)

- Built a platform to manage freight operations with modules like Quotes, Orders, Carriers, and Customer Management. Improved operational efficiency and carrier selection, delivering a smooth logistics experience
- **Stack:** Node.js, sails.js, [Socket.IO](#), mysql, postgresql, Redis, TypeScript, React.js

Tic-Tac-Toe — [Linkedin Video link](#)

- Engineered a low-latency Tic-Tac-Toe game engine using FastAPI and Socket.IO for real-time state management.
- Implemented Redis for data persistence and BullMQ for robust task scheduling.
- Developed a dynamic, responsive front end with React.js, featuring Material-UI, Lottie animations, and Redux Toolkit for state management.

EDUCATION

Government Engineering College, Godhara — Degree/Grade — June 2016 - May 2020
